Fibroblast growth factor 4-I precursor (FGF-4-I) (HBGF-4-I) (Embryonic fibroblast growth factor I) (XEFGF-I).
Xenopus laevis (African clawed frog).
                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=92115916; PubMed=1618138;

"Expression of a novel FGF in the Xenopus embryo. A new candidate inducting factor for mesoderm formation and anteroposterior specification.";
Development 114:711-720(1992).
-!- FUNCTION: GOOD CANDIDATE FOR AN INDUCING FACTOR WITH POSSIBLE ROLES BOTH IN MESODERM INDUCTION AT THE BLASTULA STACE AND IN THE FORMATION OF THE ANTEROPOSTERIOR AXIS AT THE GASTRULA STAGE.
-!- SUBCELLULAR LOCATION: Secreted (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- SIMILARITY: Belongs to the heparin-binding growth factors family.

EXHIBITS STRONG MITOGENIC PUNCTION: CAN TRANSFORM NIH 3T3 CELLS. EXHIBITS STRONG MITOGENIC PROPERTIES (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: Extracellular.
-!- TISSUE SPECIFICITY: Embryos, adult muscles and adult testis.
-!- SIMILARITY: Belongs to the heparin-binding growth factors family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

-I- FUNCTION: MAY BE THE ENDOGENOUS RIDGE SIGNAL FOR LIMB DEVELOPMENT.

-I- FUNCTION: MAY BE THE ENDOGENOUS RIDGE SIGNAL FOR LIMB DEVELOPMENT.

BETWEEN SONIC HEDGEHOG (SHH) AND FGF4.

-I- TISSUE SPECIFICITY: POSTERIOR RIDGE.

-I- INDUCTION: By retinoic acid.

-I- SIMILARITY: Belongs to the heparin-binding growth factors family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -i- SUBCNIT: Monomer.
-i- SUBCELLULAR LOCATION: Secreted.
-i- TISSUE SPECIFICITY: Glial cells.
-i- PTM: Three molecular species were found (30 kDa, 29 kDa and 25
-i- PTM: Three molecular species were found (30 kDa, 29 kDa and 25
kDa), cleaved at Leu-4, Val-13 and Ser-34 respectively. The smaller ones might be products of proteolytic digestion.
Furthermore, there may be a functional signal sequence in the 30 kDa species which is uncleavable in the secretion step.

-! FUNCTION: The heparin-binding growth factors are angiogenic agents in vivo and are potent mitogens for a variety of cell types in vitro. There are differences in the tissue distribution and concentration of these 2 growth factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                      01-FEB-1994 (Rel. 28, Created)

J. Biol. Chem. 271:30263-30271(1996)
-!- FUNCTION: The heparin-binding growth factors are angiogenic agents in vivo and are potent mitogens for a variety of cell types in vitro. There are differences in the tissue distribution and concentration of these 2 growth factors.

Biochem. Biophys. Res. Commun. 243:148-152(1998).
I-FUNCTION: Induces heparcocallular proliferation. Has no biological effect on the heart (By similarity).
I-SUBCELIULAR LOCATION: Secreted (By similarity).
SINILARITY: Belongs to the heparin-binding growth factors family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         25 ACQAHPIPDSSPLLQFGGQVRQRY-----LYTDDAQQTEAHLEIREDGTVGGAADQ-
In adult, most abundant in hippocampus. SIMILARITY: Belongs to the heparin-binding growth factors family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostowi;

                                                                                                            -1- SUBUNIT: Monomer.
-1- MISCELLANEOUS: This protein binds heparin, although less strongly than does DFGF.
                                                                                                                                                                                                                                                                                                                            -!- SIMILARITY: Belongs to the heparin-binding growth factors family.

"Developmental expression of the Xenopus int-2 (FGF-3) gene:
activation by mesodermal and neural induction.";
Development 115:65-702(1992).
-i. FUNCTION: POTENT MITOGEN AND TRANSFORMING AGENT.
-i. SIMILARITY: Belongs to the heparin-binding growth factors family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                  Xenopus laevis (African clawed frog).

-!- FUNCTION: The heparin-binding growth factors are angiogenic agents

-!- FUNCTION: The heparin-binding growth factors are angiogenic agents

in vivo and are potent mitogens for a variety of cell types in vitro. There are differences in the tissue distribution and concentration of these 2 growth factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SEQUENCE OF 22-41.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        116 YLGMNEKGELYGSEKLIQE-CVFREQFEENWYNIYSSNIYKHADIGRRYYVALNK---D 170
                                 patterning.
SUBCELULUAR LOCATION: Secreted.
SUBCELULUAR LOCATION: Secreted.
TISSUE SPECIFICITY: Maternal transcript is found mainly in the animal hemisphere. Zygotic transcript is found around the blastopore and in the late gastrula stage, in the dorsal part. In later stages it is found along the dorsal part and head region. DEVELOPMENTAL STAGE HT MATERNAL PROTEIN IS DETECTED UP TO THE BLASTULA STAGE BUT DECLINES BY THE BRAILY GLASTRULA. ZYGOTIC EXPRESSION STARTS AT AROUND EARLY GASTRULA; THE LEVEL OF EXPRESSION REACHED AT STAGE 15 PERRSISTS DURING NEURILIA AND TAILBUD STAGES, AND IS FURTHER INCREASED DURING THE TADPOLE STAGES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- PTM: Known to be glycosylated.

N,Alternate names: transforming protein int-2

C;Species: Homo sapiens (man)

C;Accession: 504742

R;Brookes, S.; Smith, R.; Casey, G.; Dickson, C.; Peters, G.

A, Pitle: Sequence organization of the human int-2 gene and its expression in teratocarci

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A)Molecule type: protein
A)Residues: 16-24;121-127;134-143 <SAS>
A)Experimental source: heart
C)Comment: The acidic and basic fibroblast growth factors are the major endothelial-cell
ell types in vitro (although bFGF is 30-100 times more potent than aFGF in stimulating t
C)Comment: This protein binds heparin, although less strongly than does bFGF.
C)Comment: There are some sequence similarities between residues 117-126 (a region flank
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A; Cross-references: EMBL:X66446; NID:g411; PIDN:CAA47063.1; PID:g412
